

HUMAN HEALTH DIVISION

FRIULCHEM S.p.A.

A private chemical-pharmaceutical company dealing with research, development and production of original & generic pharmaceutical products for both human and veterinary fields

Friulchem, belonging to the Swiss Group Evultis SA based in Lugano, was established by the Mazzola family in 1996 in the Italian region of Friuli Venezia Giulia. Fully compliant with the EU cGMP, Friulchem was created for performing contract manufacturing activities in the human and veterinary pharmaceutical field (blending, micronization and granulation of chemical and pharmaceutical products).

.

“The partnership with international customers for the development of new Products is a vote of confidence that we are proud of. In these years our clients have got to know and test the quality of our productions: working with us, they know they can rely on quality results and respect of timelines. Considering the widely diffused habit of big pharma to delocalize manufacturing in markets with low cost manpower, the partnership with an Italian company make it a win to win choice.”

*The President
Disma Giovanni Mazzola*

FRIULCHEM S.p.A.

Friulchem with its Human Division is engaged in research, development and production of difficult to make generic finished product, innovative cosmoceuticals and high quality food supplements, sold worldwide through licensees.

Friulchem specializes in difficult to formulate prescription products and has a consolidated experience in sterile injectable forms and sterile solutions like eye drops.

Our offer allows our partners to complement their product portfolio with difficult-to-formulate, not top-selling pharmaceuticals.

Our partners are the most important players in the pharmaceutical market. We are always looking for new partners to start and share our developments from the very beginning.

HUMAN PRODUCTS PORTFOLIO

Our partners are the most important players in the pharmaceutical market. We are always looking for new partners to start and share our developments from the very beginning.

Friulchem Spa - PRODUCT LIST 2018

Product	Description	Status

Teicoplanin	200 mg Lyophilized 400 mg Lyophilized	MA obtained and/or Dossier in eCTD available MA obtained and/or Dossier in eCTD available

The Pigmentation Disorders

Often a change in the skin color is the manifestation of an ectodermal extracutaneous disease. This is an unsightly condition of interest, dermatologically characterized by hypopigmentation (leucoderma) or hyperpigmentation.

There are different forms of hyperpigmentation:

- The hyperpigmentation caused by accumulation of melanin (hypermelanosis) or originated from darkening causes (blood, exogenous pigment, carotene);
- Hypermelanosis congenital: neurofibromatosis, xeroderma pigmentosum and Mongolian spots;
- Hypermelanosis acquired: secondary to systemic diseases, drugs, UV, post-traumatic results or treatments;

Melasma is the most common form!

Effective and safe
bleaching cream.

K5® LIPOGEL CAN HELP!

K5® Lipogel is a lightly perfumed, allergène-free formulation, having an effective whitening action on the brown skin spots due to excessive sun exposure, age, oral contraceptives, use of photosensitizing products, freckles and pigmentation around scars caused by acne or surgical intervention.

K5® Lipogel is currently notified as a cosmetic product in Italy and it can be immediately sold all over Europe.

Swiss certificate for therapeutic products

Another brand is available for the MD version of our product:

K5 Skinstar®, Antibrown Spots Skin Lipogel

The MD has been obtained in Switzerland.
